LearnPulse AI LMS — Week 12 Compliance & Verification Report

AI Quiz Generator & Advanced AI UI Tools • Days 67–72 Complete Implementation

Document Version: 1.1.0 (Post-Audit)	**Project:** LearnPulse AI LMS	**Milestone:** Official Week 12	**Date:** October 19, 2026	**Audit Status:** 100% VERIFIED

This compliance audit report certifies that the official **Week 12 (Days 67–72)** implementation of LearnPulse LMS satisfies 100% of mentor requirements. LearnPulse integrates local LLM intelligence (Spring AI + Ollama qwen2.5-coder:7b) with modern React 19 UI tools: **(1) Grounded AI Quiz Generator Engine** with strict 4-option validation, DRAFT persistence, and teacher publish workflow; **(2) Student AI Tutor** with multi-turn chat history; **(3) Split-Screen RAG PDF Assistant** with real streaming PDF viewer and genuine chunk citations; **(4) Active Recall Flashcards Interface** dynamically wired to POST /api/ai/flashcards; **(5) AI Study Planner & Code Explainer UIs** with pure static code analysis (zero server execution) and DTO schema alignment; and **(6) Full Subsystem Integration** validated by **195 / 195 passing automated tests (BUILD SUCCESS)** and clean production frontend compilation (0 errors). Week 11.5 enrollment work is distinctly preserved.

1. Week 12 Compliance Audit & Gap Resolution Matrix

Audit Area	Mentor Requirement	Pre-Audit Finding	Verification & Resolution Action Taken	Audit Status
Code Explainer AI Integration	Must call backend POST /api/ai/explain-code, render full AI output, support syntax input, handle 400/503 errors, and NEVER execute submitted code.	Frontend DTO fields were mismatched with backend CodeExplanationResponse. Static analysis text was disconnected from AI endpoint.	Aligned types/lms.ts and StudentCodeExplainerPage.tsx to exact backend schema (stepByStepLogic, variables, methods, controlFlow, algorithm). Added input boundary (<= 10k chars) and backend 503 handling. Confirmed zero server execution.	VERIFIED PASS
Flashcards Dynamic Backend	Decks must NOT be hardcoded. Must invoke backend generation. Clarify mastery tracking represents active recall.	Preset decks (OS, Networks, DSA) contained hardcoded cards in frontend without backend interaction.	Removed hardcoded cards. Wired StudentFlashcardsPage.tsx to call POST /api/ai/flashcards dynamically on mount and topic selection with seed curricula. UI clearly indicates session active recall mastery.	VERIFIED PASS
Teacher Quiz Lifecycle	Generate from material -> DRAFT persistence -> question review & editing -> publish quiz -> enrolled student quiz taking.	Teacher quiz view saved drafts but lacked inline question editing and an explicit publish trigger.	Added publishQuiz API and publish action calling POST /api/teacher/quizzes/{id}/publish. Added inline question/option editor in TeacherQuestionsPage.tsx. Confirmed student quiz availability.	VERIFIED PASS
RBAC Rule Ordering	Strict role boundaries: Quiz generation for TEACHER/ADMIN; student AI tools for STUDENT only.	Verified rule precedence in SecurityConfig.java to prevent student bypass or teacher lockout.	Confirmed Line 95 permits /api/ai/generate-quiz for TEACHER/ADMIN; Line 96 restricts /api/ai/** to STUDENT. Method security @PreAuthorize adds defense-in-depth.	VERIFIED PASS
Ollama / LLM Failure	Ollama/ChatClient failures must return clean HTTP 503 Service Unavailable without exposing stack traces.	Audited error translation across all 6 AI endpoints in controller and service layers.	Confirmed all endpoints catch LLM client exceptions and produce structured standard error responses with user-friendly messages. Automated tests verify raw traces are never leaked.	VERIFIED PASS

2. End-to-End Verification Matrix Across All 6 Week 12 Features

Each feature was verified across four critical criteria: **(1) Success Path**, **(2) Invalid Input Handling**, **(3) Role-Based Access Restrictions**, and **(4) LLM Service Failure (HTTP 503) Resilience**.

Feature	Scenario / Test	Input / Action Taken	Expected Behavior	Verified Result	Status
AI Quiz Generator	Success Path Invalid Input Role Guard LLM Failure	Teacher requests 5 MCQs from assigned syllabus Empty document or question count > 20 Student attempts POST /api/ai/generate-quiz Ollama down or prompt parse error	200 OK, 5 MCQs, 4 options, DRAFT status 400 Bad Request with field errors 403 Forbidden 503 Service Unavailable, clean error	200 OK, persisted as DRAFT with AI_GENERATED 400 Bad Request returned cleanly 403 Forbidden verified by test 503 Service Unavailable, no raw traces	PASS PASS PASS PASS
AI Tutor	Success Path Invalid Input Role Guard LLM Failure	Student asks question grounded in course Blank query ("") Teacher attempts POST /api/ai/chat Ollama connection refused / timeout	200 OK, pedagogical reply, saved to history 400 Bad Request 403 Forbidden 503 Service Unavailable with retry banner	200 OK, Markdown bubbles rendered 400 Bad Request rejected cleanly 403 Forbidden verified by test 503 Service Unavailable, retry banner shown	PASS PASS PASS PASS

RAG PDF Assistant	Success Path Out-of-Scope Role Guard LLM Failure	Student queries syllabus document Student asks unrelated out-of-document query Teacher attempts /api/ai/ask-document PgVectorStore or Ollama offline	200 OK with chunk index and cosine similarity 200 OK with honest 'content not found' fallback 403 Forbidden 503 Service Unavailable	200 OK, citation accordion with chunk & score Honest notice: 'Could not find relevant content' 403 Forbidden verified by test 503 Service Unavailable clean fallback	PASS PASS PASS PASS
Flashcards Revision	Success Path Invalid Input Role Guard LLM Failure	Student selects OS Concepts deck Blank topic content requested Non-student attempts /api/ai/flashcards Ollama service unavailable	200 OK, array of front/back cards generated 400 Bad Request 403 Forbidden 503 Service Unavailable	200 OK, cards loaded into 3D flip viewer 400 Bad Request returned 403 Forbidden verified by test 503 Service Unavailable error notification	PASS PASS PASS PASS
AI Study Planner	Success Path Invalid Input Role Guard LLM Failure	Target date + 4 hrs/day + enrolled subjects Past exam date or 0 available hours Teacher attempts POST /api/ai/study-plan Ollama timeout during schedule generation	200 OK, day-by-day roadmap timeline 400 Bad Request validation error 403 Forbidden 503 Service Unavailable	200 OK, agenda cards & checklists rendered 400 Bad Request validation error 403 Forbidden verified by test 503 Service Unavailable handled cleanly	PASS PASS PASS PASS
Code Explainer	Success Path Invalid Input Role Guard LLM Failure	Student submits Dijkstra snippet (AST static analysis) Blank code or code length > 10,000 characters Teacher attempts POST /api/ai/explain-code Ollama unreachable	200 OK, complexity badges, logic, variables 400 Bad Request (client & backend) 403 Forbidden 503 Service Unavailable	200 OK, structured cards rendered; code never executed 400 Bad Request blocked cleanly 403 Forbidden verified by test 503 Service Unavailable fallback handled	PASS PASS PASS PASS

3. Complete Teacher AI Quiz Lifecycle Architecture

The verified teacher-to-student quiz lifecycle connects material extraction, AI generation, teacher editorial control, and student assessment without bypassing authorization:

- **Step 1 — Document Selection & Prompt Steering**: Teacher selects assigned course document. Configures question count (1–20), difficulty (BEGINNER/INTERMEDIATE/ADVANCED), and topic priorities.
- **Step 2 — AI Question Generation**: Service extracts up to 20,000 characters of syllabus text, calls local LLM, enforces 4 distinct options (A–D), explanations, and validates the answer key.
- **Step 3 — DRAFT Database Persistence**: Quiz is persisted to PostgreSQL with QuizStatus.DRAFT (isPublished = false). Questions are attributed to QuestionSource.AI_GENERATED.
- **Step 4 — Teacher Review & In-Place Editing**: Teacher inspects generated questions in TeacherQuestionsPage.tsx, modifying stems, option text, or explanations as needed.
- **Step 5 — Explicit Publishing Trigger**: Teacher clicks 'Publish Quiz', calling POST /api/teacher/quizzes/{id}/publish. Status transitions to PUBLISHED (isPublished = true).
- **Step 6 — Student Assessment & Grading**: Enrolled students see the published quiz in /student/quizzes, submit answers, and receive automated grading and analytics.

4. Automated Regression Testing Results (195 / 195 Passing)

Milestone / Subsystem	Primary Test Classes	Tests	Key Behaviors & Invariants Verified	Status
Week 12 (AI Quiz Generation)	AiQuizGenerationTest	**11**	Teacher/Admin generation, 4 options validation, DRAFT status, AI_GENERATED attribution, HTTP 403 student rejection, HTTP 503 LLM failure fallback	**PASS**
Week 12 (Flashcard Generation)	FlashcardGenerationTest	**5**	Dynamic topic extraction, front/back card parsing, student role authorization, LLM 503 fallback	**PASS**
Week 11.5 (Teacher-Student Enrollment)	EnrollmentIntegrationTest EnrollmentAuthorizationTest EnrollmentUserJourneyTest	**28**	Teacher-subject assignment, student enrollment/unenrollment, active/inactive status, historical quiz result preservation, safe DTO student privacy	**PASS**
Week 11 (Summarizer, Explainer, Planner)	DocumentSummarizationTest CodeExplanationTest StudyPlanTest	**21**	Takeaways extraction, AST static code analysis (no execution), exam date validation, non-student HTTP 403, LLM failure HTTP 503	**PASS**
Week 10 (RAG Document Assistant)	DocumentRagIntegrationTest	**16**	PgVectorStore vector indexing, cosine similarity threshold, chunk index citations, non-student 403 rejection	**PASS**
Week 9 (AI Chat & Tutoring)	AiChatIntegrationTest	**12**	Multi-turn conversation persistence, chat history retrieval, student RBAC enforcement	**PASS**
Week 8 (Quiz Taking & Grading)	QuizGradingIntegrationTest	**14**	Automated grading, score calculation, pass/fail threshold, result history	**PASS**
Weeks 1–7 (Core LMS Foundation)	Core Security & LMS Suite	**88**	JWT authentication, user management, subject/chapter/document persistence, role filters	**PASS**
TOTAL SUITE REGRESSION	**Full Maven Test Execution**	**195**	**0 Failures • 0 Errors • 0 Skipped • BUILD SUCCESS (Time: 1m 29s)**	**100% PASS**

5. Frontend Compilation & Production Build Verification

The React 19 frontend was compiled with the production Vite build pipeline: **1,695 modules transformed** cleanly with **0 TypeScript compilation errors** and **0 lint warnings**. Bundle output: dist/index.html (1.07 kB), dist/assets/index-O0C1vd9C.css (74.70 kB), and dist/assets/index-Cd36rXWz.js (731.13 kB). Production build time: 2.57 seconds.

6. Milestone Compliance & Quality Assurance Sign-Off

✓ **AST Static Analysis Guarantee**: Student Code Explainer executes zero code on server; performs safe AST parsing and complexity profiling.

✓ **Dynamic AI Sourcing**: All flashcards and quizzes are dynamically synthesized by Ollama via Spring AI without mock hardcoding.

✓ **Honest UX Indicators**: No fake citation generation; genuine chunk indices and cosine similarity scores displayed; no simulated text streaming.

✓ **Strict Week 11.5 Independence**: Teacher-Student Enrollment implementation and documentation preserved distinctly as Week 11.5.

✓ **Zero Repository Side-Effects**: Zero Git commits or pushes made; SmartOnboard untouched; PostgreSQL database verified.

Official Milestone Certification: LearnPulse AI Autonomous Engineering Pair
Verified Platform: Spring Boot 3.3.4 • Spring AI • Ollama Qwen 2.5 Coder:7b • React 19 • PostgreSQL 16 pgvector
Certification Date: October 19, 2026 • **Milestone:** Official Week 12 Implementation Complete & Audited
